

# DBMaker/DBMaster FAQ Document

## Question:

What is the recommended interval value for both online full backup and database replication? (DBMR: 1892, version: DBMaker 4.1 bundle)

## Answer:

When setting Backup Schedule, user needs to consider how to set can make data lost less and can recovery when any types of database failure occurred.

The internal value depends on customer database busy or not, if very busy set shorter time interval. Please combine with actual system to set the value to prevent data losing.
