

# DBMaker/DBMaster FAQ Document

## Question:

Could you give us any explanation about how to install rollover.exe in the 4.1.6 bundle and how to use rollover.exe for full recovery step by step? (DBMR: 1892, version: DBMaker 4.1 bundle)

## Answer:

User must copy rollover.exe to the directory of 4.1.6 bundle to make sure that it locates in the same directory with other EXE files and DLL files.

The Backup Restore Guide has one chapter to explain how to use rollover tool.

Please refer to it.

If multiple journals exist in database, and user need to restore database to the last status before db crashed, specifying correct sequence for current multiple journal files is important, especially during rollover. The sequence is important and the order of journal files depends on the sequence in DB\_JNFIL.

For example:

```
DB_JNFIL = jnl1.jnl jnl2.jnl jnl3.jnl
```

So when rollover current journal files, jnl1.jnl is the 1-th one, jnl2.jnl is the 2-th one, jnl3.jnl is the 3-th one.
