

DBMaker/DBMaster FAQ Document

Question:

How to use Java stored procedure in 4.3.3 bundle version? (DBMR 1912)

Answer:

Suppose the HOME directory is: **C:\dbmaker\43bundle**.

Workaround for building Java sp with 4.3.3 bundle as follows:

- (1) Copy **jre** folder from normal to bundle (C:\dbmaker\43bundle\jre)
- (2) Copy **dmclassloader.jar** to bundle\bin (C:\dbmaker\43bundle\bin)
- (3) Move bundle all **jar** files to bundle\bin (C:\dbmaker\43bundle\bin). Jar files are dmjdbc20xa.jar, dmjdbc20.jar, dmjdbc30.jar.

Note: If any one of these jar files exist in C:\dbmaker\43bundle folder, calling java sp will not execute any operation.

Now, user can create and use Java sp with 4.3.3 bundle.
