

DBMaker/DBMaster FAQ Document

Question:

How to register OLE DB driver for bundle versions in Windows10 x64? (DBMR2996)

Answer:

To install OLE DB driver bundle version in Windows x64, you need to register the driver manually. If you register the 32-bit driver, open cmd and enter below commands:

```
C:\> cd C:\dbmaker_bundle  
C:\dbmaker_bundle> C:\Windows\SysWOW64\regsvr32.exe dmole52.dll
```

If you register the 64-bit driver, enter below commands:

```
C:\> cd C:\dbmaker_bundle  
C:\dbmaker_bundle> C:\Windows\System32\regsvr32.exe dmole52.dll
```

In addition, there is different method to register OLE DB between normal and bundle version. The method to register bundle version is "Provider=DMOLE52B;Data Source=db_name;User Id=SYSADM;Password=".

Note. DBMaker before bundle 5.2.3 version didn't include dmole52.dll, you need to upgrade the DBMaker version from 5.2.3.

Version: 5.2.3
