

# DBMaker/DBMaster FAQ Document

## Question:

How to avoid the use of high-frequency characters 3?

## Answer:

First, user should backup the file tw.tab which located in c:\dbmaker\4.3\shared\stopword\ tw.tab, then open tw.tab and delete following contents.

**0**

**1**

**2**

**3**

**4**

**5**

**6**

**7**

**8**

**9**

**10**

After that, rename tw.tab to stopword.tab.(xx.tab user can named it by themselves)

Second, set DB\_STPWD= stopword.tab in dmconfig.ini, then restart database.

At last, delete the original text index and recreated it can exclude high-frequency characters 3.

Version: DBMaker5.x
