

DBMaker/DBMaster FAQ Document

Question:

How to start or stop a NT service for a database? (DBMR2260)

Answer:

Answer2: The command “net start ServiceName” is used to start a NT service and the command “net stop ServiceName” is used to stop a NT service.

For example, suppose a NT service automatically named DBMASTER-DBSAMPLE5 by system for a database named DBSAMPLE5 is created.

The following command is used to start the service.

```
net start DBMASTER-DBSAMPLE5
```

The following command is used to stop the service.

```
net stop DBMASTER-DBSAMPLE5
```
