

# DBMaker/DBMaster FAQ Document

## Question:

What's the function of dmBackup.l\_k in DBMaker? (DBMR2268)

## Answer:

dmBackup.l\_k is used to lock dmBackup.his. When a backup is performed, DBMaker will automatically create dmBackup.l\_k to ensure every process's write operation on dmBackup.his is mutually-exclusive.

Version: DBMaker4.x/5.x

Product: Normal/Bundle

Platform: Windows/Linux
