

DBMaker/DBMaster FAQ Document

Question:

How to use DCI_WHERE_CONSTRAINT under MF COBOL 4.1 on Linux? (DBMR2553)

Answer:

From the end of January 2014, DBMaker DCI begin to support DCI_WHERE_CONSTRAINT. Users can use it by calling DCI_SET_WHERE. If want to use DCI_WHERE_CONSTRAINT under MF COBOL 4.1 on Linux, users can put the new lib libdmmfcbl.a under ~DBMaker/5.2/lib to use the new DCI, or modify the makefile and make rtsbmf, for example, changing from "cob -vgxo rtsdbmf -e "" +F DBMAKERINTF +F DCI_SETENV +F DCI_GETENV +F DCI_DISCONNECT\" to "cob -vgxo rtsdbmf -e "" +F DBMAKERINTF +F DCI_SETENV +F DCI_GETENV +F DCI_DISCONNECT +F DCI_SET_WHERE \".

Version: DBMaker 5.2.x/5.3.x

Product: Normal/Bundle

Platform: Linux
