

DBMaker/DBMaster FAQ Document

Question:

Why cannot install 64bit DBMaker setup on some x64 platform? (DBMR2629)

Answer:

The cause of installing failure is that '[Microsoft Visual C++ 2005 Redistributable Package](#)' is incompatible with DBMaker, and users can uninstall the original '[Microsoft Visual C++ 2005 Redistributable Package](#)', or download and install the new Microsoft Visual C++ 2005 Service Pack 1 Redistributable Package (Ver-61000). This problem has been solved in versions built after 2014/10/14.

Version: DBMaker 5.2.x /5.3.x

Product: Normal

Platform: Windows
