DBMaker/DBMaster FAQ Document

Question:

What's the meaning of "10054" and "[last func=32]" in the error message "ERROR (25350), connection already broken, database may already be shutdown or network may have failed [netio.c , 462],-1,0.10054 [last func=32]"? (DBMR2748)

Answer:

"[last = func 32]" is an internal definition and used for the developer to trace a position.

"10054" means a socket error which may be caused in many situations, such as shutdown, crash or network errors.

Users can find out which operation causes this error by checking the odbc log.
