

DBMaker/DBMaster FAQ Document

Question:

How to avoid the infrequent error "ERROR [IM002] [Microsoft][ODBC Driver Manager] Data source name not found and no default driver specified." in the process of a WEB application accessing ODBC? (DBMR2740)

Answer:

In the application, users can replace "DSN=XXXXX" with ""Driver=DBMaster 5.x.x Driver" in ODBC Connection String to avoid this error, for example, ODBC Connection String="Driver=DBMaster 5.x.x Driver;DATABASE=XXXXX;SVADR=127.0.0.1;UID=SYSADM;Pwd=".

Version: DBMaker 5.1.x

Product: Normal/Bundle

Platform: Windows
