

# DBMaker/DBMaster FAQ Document

## Question:

How to use the date in the format of "dd/mm/yyyy" or "dd-mm-yyyy" in DBMaker?  
(DBMR2773)

## Answer:

Users set **DB\_DaoFm** in **dmconfig.ini** to control the date output format. Now DBMaker supports the following date formats.

mm/dd/yy

mm-dd-yy

dd/mon/yy

dd-mon-yy

mm/dd/yyyy

mm-dd-yyyy

yyyy/mm/dd

yyy-mm-dd

dd/mon/yyyy

dd-mon-yyyy

dd.mm.yyyy

DBMaker doesn't support "dd/mm/yyyy" or "dd-mm-yyyy", but users can use following way as a workaround.

```
select CAST(DAYOFMONTH(column_name) AS VARCHAR(10))|| '/'||  
CAST(MONTH(column_name) AS VARCHAR(10))|| '/'|| CAST(YEAR(column_name) AS  
VARCHAR(10)) AS "DATE_FORMATED" from table_name;
```

Version: DBMaker 5.3.x
