

DBMaker/DBMaster FAQ Document

Question:

How to deal the error handling in VC program when there appear SQL_ERROR or SQL_SUCCESS_WITH_INFO?

Answer:

It needs the program to do the estimation. If the **SQLCODE=-1**. It should write the code to deal with the error handling. The sample code is too long to add it here, and if you want to get the detail of the sample code please connect with the DBMaker Support Team.
