DBMaker/DBMaster FAQ Document

Question:

When load the file which was unloaded from other DB (not DBMaker) in SQL script into DBMaker, what should be paid attention?

Answer:

To load the file into DBMaker successfully, you should care the following points:

1. To set the extname of the file to .s0.

2. Make sure the max length of a line in s0 file do not over 80 characters. Use the escape character "\" to split 2 or more lines every 80 characters. And remember to handle double byte word.
