DBMaker/DBMaster FAQ Document

Question:

After the server side has upgraded to 4.1.6 from 4.1.4, can the ODBC program linked with 4.1.4 work as well as before?

Answer:

Generally, the ODBC program linked with the 4.1.4 static library (dmapi41.lib for windows, dmapic.a for Linux/Unix) can access the 4.1.6 server, but to enjoy the newly added functions and avoid the bugs fixed in 4.1.6 (Please see the 4.1.6 release notes for
details), we suggest that the ODBC program should be re-linked with the static library (dmapi41.lib for Windows, dmapic.a for Linux/Unix) of 4.1.6.
