

DBMaker/DBMaster FAQ Document

Question:

Does DBMaker support the UPDATE/INSERT/DELETE with target table in subquery?
(DBMR: 1913)

Answer:

At present, DBMaker does not support the UPDATE/INSERT/DELETE with target table in subquery, but user can replace it by temporary table.

For example:

```
dmSQL> INSERT INTO uselgcsvcs
```

```
SELECT host_id, service_name, MAX(specification) as specification FROM usesvcs T  
WHERE NOT EXISTS (SELECT service_name FROM uselgcsvcs L WHERE T.host_id =  
L.host_id and T.service_name = L.service_name) GROUP BY host_id, service_name;
```

```
ERROR (6172): [DBMaker] cannot select into a table which has already been  
referenced in the query
```
