

# DBMaker/DBMaster FAQ Document

## Question:

How to set DSN for dbmaker4.3 bundle on 64bit? (DBMR: 1911, version: DBMaker 4.3 bundle)

## Answer:

TheOther settings are same with 32bit OS except two points:

(1) user should register DBMaker4.3 and ODBC Driver in

**[HKEY\_LOCAL\_MACHINE\SOFTWARE\Wow6432Node]** in regedit.

Node (Wow6432Node) is used to register 32bit software on 64bit OS.

(2) It should use 32bit ODBC Data Source Administrator, but not 64 bit.

Default will open 64 bit, but not 32bit. 32bit Driver Manager is **odbcad32.exe** which locates in **"C:\WINDOWS\SysWOW64"**(suppose OS is Windows 2003 x64 Edition). Please use 32bit Driver Manager to create DSN.

We do not suggest user to use 32bit DBMaker on 64bit OS. We will publish DBMaker 64 bits version (DBMaker 5.1) soon.
