

# DBMaker/DBMaster FAQ Document

## Question:

What is the relationship between the Keywords DB\_ISOLV and DB\_BROWS?

## Answer:

The influence strength of DBMaker lock option is: SQL command >connect option >dmconfig.ini setting.

If DB\_ISOLV! = 2, 3, 4, DB\_BROWS = 1 can work, if DB\_ISOLV = 2 or 3 or 4, DB\_BROWS is useless keyword.

The relationship between them is:

DB_ISOLV	DB_BROWS
1(default)	0 (dirty read) 1 (select get S lock)
2(read committed)	Not work no matter 0 or 1
3(repeatable)	Not work no matter 0 or 1
4(Phantom)	Not work no matter 0 or 1
