

DBMaker/DBMaster FAQ Document

Question:

Does DBMaker support HATR on Linux? (DBMR1918; version□DBMaker 5.0.1)

Answer:

DBMaker supports HATR (Heterogeneous Asynchronous Table Replication) feature, but DBMaker server must be located on a computer which is running on Windows. For DBMaker uses the ODBC Driver Manager to perform HATR.

Now, DBMaker 5.0.1 provides a new feature: HATR can work in Linux and it is express.

For HATR in windows, please refer to DBA manual.

For HATR in Linux, please contact DBMaker support to refer to How to use HATR Feature.doc.
