

DBMaker/DBMaster FAQ Document

Question:

is there some Notices for upgrade DBMaker 4.3 to 5.1 in application side (DBMR1975; version DBMaker 4.3)

Answer:

Notice in application side:

- ODBC Driver: if application refers to Driver name (such as "Driver={DBMaker 4.3 Driver}..."), user should modify it to 5.1 driver.
- DSN: if application refers to DSN, user should recreate the DSN by 5.1 Driver.
- If referred to dmapi43.lib, user should replace it with dmapi51.lib; If referred to 4.3 include file, user should replace it with 5.1 include file.
- JDBC Driver: if used CLASSPATH and LD_LIBRARY_PATH environment variable, user should modify them to refer to 5.1 related files.
- DDL: When used DDL, user should adjust long of each column depending on UTF8 DB; And if migrated db is 5.0 and after 5.0 versions, user should notice limitations of object naming.
