

DBMaker/DBMaster FAQ Document

Question:

How to avoid AbstractMethodError: dbmaker.sql.JdbcOdbcConnection.isValid(I)Z? (DBMR2960)

Answer:

This error indicates that the version of DBMaker JDBC driver is outdated. Please update the driver to support isValid() method in JDBC. Before DBMaker 5.4.1, you have to set validationQuery = "select 1" in context.xml. We fix this error from DBMaker 5.4.1.

Version: 5.4.1

Product: Normal/Bundle

Platform: Windows/Linux
