

# DBMaker/DBMaster FAQ Document

## Question:

What connection string does DBMaker support to connect ODBC? (DBMR3000)

## Answer:

DBMaker support below connection strings:

DRIVER: ODBC driver version.

DATABASE: Database name.

DSN: Data source name.

UID: User ID.

PWD: Password.

ERRLCODE: Set client's error message character set.

CLILCODE: Set the language code in the client side.

SVADR: Server address.

PTNUM: Port number.

ATCMT: Set autocommit on or off.

LTIMO: Set lock time out (5.4.3 #29936, 20200708).

CTIMO: Set connection time out.

STRSZ: This keyword indicates the length of returned data of string type, used only by user-defined function (UDF).

STROP: This keyword specifies whether space padding removed before applying the string concatenation operator (||).

DSCMT: This keyword specifies whether to commit a transaction when an application is disconnecting from the database.

Version: 5.4.2
