

DBMaker/DBMaster FAQ Document

Question:

How to connect DBMaker with an Android client application? (DBMR2987)

Answer:

You need to set dmjdbct3c.jar in external classpath, then change driver class and URL on your code. Add below code to connect DBMaker for Android applications.

```
Class.forName("dbmaker.jdbc.ws.client.Driver");  
Connection con = DriverManager.getConnection(  
"jdbc:dbmaker:type3://IP:port/db_name", "UID", "PWD");
```

Version: DBMaker 5.4.2, Android Studio 3.5 with API-25

Product: Normal/Bundle

Platform: Windows
