

DBMaker/DBMaster FAQ Document

Question:

Why not return OPTION_VALUE value but be asked to input value when call getsystemoption('xxxxx',?) ?

Answer:

When new client connects to old server. Call getsystemoption('xxxxx',?) get weird result. It should return OPTION_VALUE value but be asked input value. It was caused by client server is difference version, please try to be consistent version.

Weird result as following:

```
dmSQL> call getsystemoption('bksvr',?);
```

```
dmsql/Val>
```

Normal behavior should be similar as following:

```
dmSQL> call getsystemoption('bksvr',?);
```

```
OPTION_VALUE          : 0
```

Version: DBMaker 5.4.1 server + DBMaker 5.4.3 client

Product: Normal/Bundle

Platform: Windows
