DBMaker/DBMaster FAQ Document

Question:

What is the influence of group commit when DBMaker install on a high-end machine specification? (DBMR: 1922 DBMaker 4.2 OS: CentOS 4.0)

Answer:

When we set DB_GCXMW = 0 in dmconfig.ini will turn off group commit feature and don't let db server let connection sleep. When db server ready to do group commit will let some connect sleep then commit together. But dbserver cannot wake up sleeped connection. It maybe cause client command stays in 'EXDIR' Status.

Version: DBMaker 4.x, 5.x

Product: Normal, Bundle

Platform: Linux
