

DBMaker/DBMaster FAQ Document

Question:

How to avoid connect error from client to server when database started by dmsservice?

Answer:

Install DBMaker Server and Client in different computers. Start db by dmsservice in Server and connect to db from Client. If connect failed, you can turn off firewall first and try again, the problem may be solved. Of course, this is only possible reason not the only reason. If the error can't solve after you turn off firewall you can find the reasons from other aspects.

Version: DBMaker 5.x, DBMaker 5.x

Product: Normal

Platform: window XP
