

DBMaker/DBMaster FAQ Document

Question:

How to start/ stop dmserver and how to check dmserver status in redhat linux?

Answer:

we can put DBSAMPLE5 as a sample in this case.

1. The methods for start and stop dmserver in Linux as follows:

1) startup dmserver:

```
/home/DBMaker/5.2/bin/dmserver DBSAMPLE5
```

2) stop dmserver (Use client tool dmsqlc)

```
dmsqlc>connect to DBSAMPLE5 SYSADM;
```

```
dmsqlc>terminate db;
```

```
dmsqlc>quit;
```

Note: Customer also can use command to shutdown db but this not recommends way.

```
/home/DBMaker/5.2/bin/dmserver -k DBSAMPLE5
```

2. The methods for check dmserver status in Linux description as follows:

Customer can use ps command " ps -ef | grep dmserver" to check dmserver process whether exist and still need to check shared memory and clean shared memory .we suggests user restart operating system to solve this problem.
